eTable 1. Descriptions of the different types of blinding status of individuals

Type of blinding status	Definition	Examples described in RCTs included
1. Participant	Participants are the individuals receiving the experimental interventions.	Participants, patients, subjects, individuals, the people receiving the treatment
2. Healthcare clinician	<i>“Healthcare clinicians include all personnel (for example, physicians, chiropractors, physiotherapists, nurses) who care for the participants during the trial.”</i> [23]	Healthcare providers, care providers, clinic staff, healthcare (medical management) practitioners, clinicians, caregivers, the people administering the treatment
3. Data Collector	<i>“Data collectors are the individuals who collect data on the trial outcomes.”</i> [23]	Data collector(s), persons collecting the data, data collection
4. Outcomes Assessor	Outcomes assessors are the individuals who evaluates the outcome(s) of interest.	Outcome adjudicators, clinical assessment outcomes assessor, assessment and central analysis, evaluators, the people assessing the outcomes
5. Data Analysts	Data analysts are the individuals conducting the analysis of data	Data analysts, data analysis, persons analysing (analysing) the data, persons who did the analysis, the people analysing the results/data
6. open-label	open-label means none of the participants nor Healthcare clinicians were blinded.	Open label, not blinded, unmasked.
