

Supplementary figure 6

**Supplementary figure 6. TOMM22 overexpression is associated with a higher extracellular acidification rate of PDAC cells.**

ECAR of TOMM22 depleted cells [HPAF-siTOMM22] and TOMM22 overexpressing cells [BxPC3-TOMM22], relative to their respective controls (A). Data were normalized to relative cell numbers. Data represent mean  $\pm$  SEM, (n=3). Statistical analysis by unpaired Student's t-test.
