

Figure S1. Overview of the phage diversity covered in *PhageDive* in terms of phage and host taxonomy (A) and morphology (B). (A) Single members of officially classified ICTV genera included in *PhageDive* are marked by stars using ViPTree. Viral families are coloured in the inner ring, host phyla are coloured on the outer ring. (B) Distribution of morphotypes among the phages in *PhageDive* with available information on morphology.
