

Supplementary data

Effects of antibodies against dynein and γ -tubulin on microtubule organization in γ -Tu-M-expressed extracts

Microtubules are shown in red and γ -Tu-M-GFP is shown in green. **(A)** Effect of anti-dynein antibody. Extracts from oocytes injected with γ -Tu-M mRNA were incubated with taxol and anti-dynein antibody. **(B)** Effect of anti- γ -tubulin antibody. γ -Tu-M-overexpressed extracts were incubated with taxol and anti- γ -tubulin rabbit antibody that does not recognize γ -Tu-M. Similar results were obtained from two independent experiments.

Kotani and Yamashita, Supplementary data

Anti-Dynein

Anti- γ -Tu
