

Supplementary Fig. 5. Western blot analysis of anti-p14 antibodies. Serial five-fold dilutions of purified p14 were resolved by SDS-PAGE and analyzed by Western blotting using 1/10,000 dilutions of polyclonal antiserum specific for the p14 N-terminal ectodomain (α -ecto) or for the C-terminal enterokinase tag (α -EK). The quantity of p14 in duplicate adjacent wells is indicated.
