

Table 2. Inactivation rate and inhibition constants

Inhibitors	Constants
AEBSF	$3.4 \text{ M}^{-1}\text{s}^{-1}$
TPCK	$2.0 \times 10^{-3} \text{ M}^{-1}\text{s}^{-1}$
TLCK	$1.2 \times 10^{-3} \text{ M}^{-1}\text{s}^{-1}$
Leupeptin	$5.0 \times 10^{-5} \text{ M}$
Antipain	$3.4 \times 10^{-4} \text{ M}$
Chymostatin	$3.3 \times 10^{-3} \text{ M}$

Inactivation rate constants and inhibition constants were determined by utilizing PFR-MCA peptide substrate.
