

Supplementary Figure S3 Sensitivity of $\Delta\Psi_m$ of LS *T. brucei*, *T. evansi*, and procyclic insect form *T. brucei* (PF) to bongkreikic acid, an inhibitor of the ADP/ATP carrier. Cells were incubated with the inhibitor (80 μM for 1 h), stained with Rh123 and DAPI and analyzed by phase contrast and epifluorescence microscopy as described for Supplementary Figure S2. In all panels, the bar represents 20 μm .
