

Table 2: Ranges of each parameter for which the auxin patterns are stable.

Parameter	Minimum	Maximum	Ratio (max/min)
Ψ'	1.8	3.5	2
δ	0.003	0.05	16
Ψ	8	40+	5+
Γ	0.008	0.11	13

Note that the variations on pumping factor shows a stable pattern even for the highest value tested. The actual range of stability may thus be even greater than the one presented here.
