

Electronic Supplementary Material Fig. 1. The distribution of Welch p values for all probe sets hybridised with isolated abdominal subcutaneous adipocytes from 20 non-obese and 19 obese Pima Indian subjects. The figure illustrates the frequency of genes (y-axis) with the p value range (x-axis) relative to what would have been expected if the differences in gene expression levels between the two groups were similar to those expected at random

Electronic Supplementary Material Table 1. List of selected 410 genes differentially expressed in adipocytes of non-obese and obese Pima Indians.
