

Additional data file I

Additional figure I

Absence of *Wnt1* expression during eye formation. *Wnt1* *in situ* hybridization analyses at E10 (left panel) and E13 (right panel) revealed that *Wnt1* expression is readily detectable in the dorsal neural tube (purple; insert), leading to *Wnt1*-Cre-mediated recombination in virtually all neural crest stem cells [11]. On the same sections *Wnt1* is not, however, expressed in ocular structures during development.
