

Table 7. R_0 for different transmission probabilities, calculated by three different methods, as described in the text, and for the index cases coming from different age groups as used in the “Attack rate pattern weighted index case” method

| | Community level | | National level |
|--------------------------|-------------------|---|-------------------------------------|
| Transmission probability | Random index case | Attack rate pattern weighted index case | Slope of cumulative number of cases |
| 0.09 | 1.08 | 1.21 | |
| 0.12 | 1.42 | 1.54 | 1.60 |
| 0.15 | 1.77 | 1.86 | 1.91 |
| 0.17 | 1.99 | 2.07 | 2.11 |
| 0.20 | 2.31 | 2.37 | 2.39 |

| | Community level, age (in years) | | | | |
|--------------------------|---------------------------------|------|-------|-------|------|
| Transmission probability | 0-4 | 5-18 | 18-29 | 30-64 | >64 |
| 0.09 | 1.19 | 1.71 | 0.90 | 0.96 | 0.61 |
| 0.12 | 1.57 | 2.25 | 1.20 | 1.26 | 0.80 |
| 0.15 | 1.93 | 2.79 | 1.49 | 1.56 | 1.00 |
| 0.17 | 2.17 | 3.14 | 1.67 | 1.75 | 1.12 |
| 0.20 | 2.52 | 3.65 | 1.95 | 2.05 | 1.12 |
