

Table S3. Significance of the top six variables identified by logistic regression analysis of cytochrome P450 chimeras.

Variable	p-value¹
1	1×10^{-12}
5	3×10^{-8}
7	2×10^{-17}
1-7	3×10^{-12}
1-5	0.01
5-8	0.02

¹p-values were calculated by removing each variable from the model and applying the likelihood ratio test (see Methods).
