Protocol S5-Comparison of LD and sperm typing in intervals 13 and 15
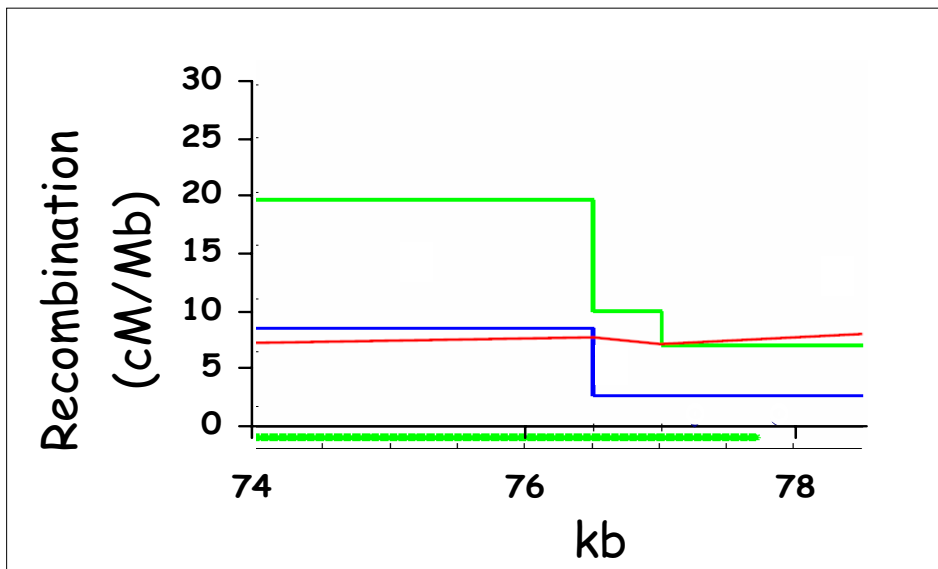

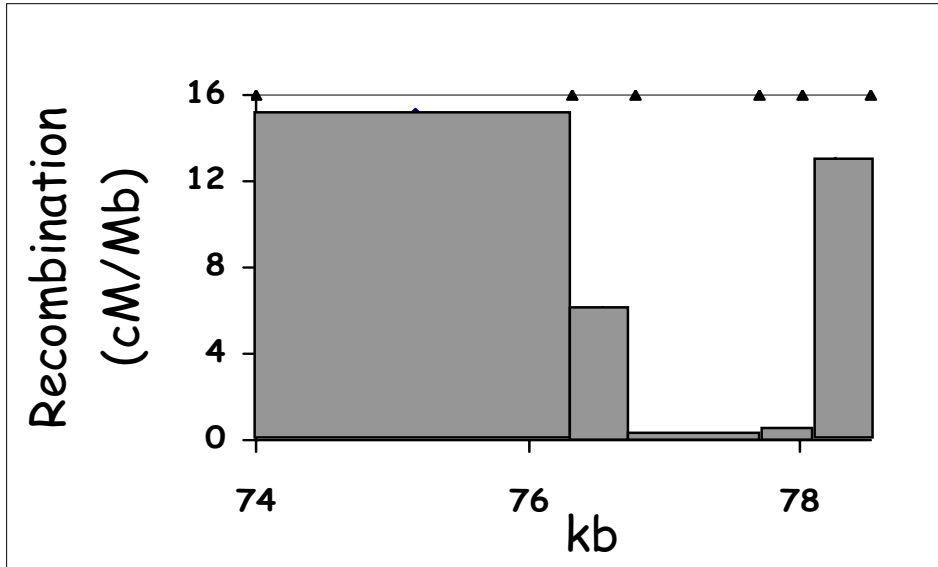

Figure 1. Comparison of sperm typing measurements averaged for the three individuals and both reciprocal crossovers measured in interval 13 (top) with recombination predicted by the three LD based estimators, LDHat-red, Hotspotter-green, and ABC-red (bottom). Crossover data is found in Supplement 2 and data for LD based estimators is found in Supplement 6.

Figure 2. Comparison of sperm typing measurements averaged for the three individuals and both reciprocal crossovers measured in interval 15 (top) with recombination predicted by the three LD based estimators, LDHat-red, Hotspotter-green, and ABC-red (bottom). Crossover data is found in Supplement 2 and data for LD based estimators is found in Supplement 6.
