

ApoB-crescent-positive cells

Supplementary Figure 2. Huh7 cells were cultured in the following conditions for 6 h and the percentage of cells showing ApoB-crescents were counted. The conditions examined are: control (10% FCS), 10% LPDS, 50 μ M mevastatin/50 μ M mevalonolactone, 10% LPDS plus 50 μ M mevastatin/50 μ M mevalonolactone, and 5 μ g/ml brefeldin A. In comparison to the control, all treatments increased ApoB-crescents significantly. Results of three independent experiments were averaged; statistical significance was examined by Student's *t*-test (* $p < 0.05$, ** $p < 0.01$).
