

Figure 3 : T and B cells isolated from SRC-3^{+/+} and SRC-3^{-/-} spleen mice were stimulated respectively by anti-CD3 + anti-CD28 and anti-IgM + anti-CD40 in the presence or absence of aspirin. The geometric mean fluorescence is inversely proportional to proliferation rate. +(p<0.05), ++(p<0.01) indicates a significant difference compared with SRC-3^{+/+} cells. *(p<0.05), **(p<0.01) indicates a significant difference relative to the condition without aspirin.
