

Supplementary Figure 1, Yoshida et. al.

Supplementary Figure 1

Serum anti-*C. rodentium* IgG levels at 0, 7, and 21 days after *C. rodentium* infection measured by ELISA. *C. rodentium* antigen for the detection of IgG was prepared by using the supernatant of bacteria dissolved with TNE buffer including NP-40, EDTA, protease inhibitor. The mean \pm S.D. are shown for each group (n=4).
