Corrections

Hypouricaemia and Proximal Renal Tubular Dysfunction in Acute Myeloid Leukaemia

The authors state that in the paper under this title (28 September, p. 775) the control value of filtered urate (mg/min), shown as 10.71 ± 1.07 , should have been 4.71 ± 1.07 .

Ketotic Hypoglycaemia

We regret that a printing error occurred in the letter from Dr. N. R. M. Buist (29 June, p. 730). The opening sentences of the second paragraph should have read: "Most of these children have a normal head size. Glucose requirements for cerebral metabolism are therefore high relative to the small body size . . ."
