

This is an appendix to the paper by Olson & McCauley 2000 Linkage disequilibrium and phylogenetic congruence between chloroplast and mitochondrial haplotypes in *Silene vulgaris*. *Proc. R. Soc. Lond. B* **267**, 1801-1808.

Electronic appendices are refereed with the text. However, no attempt has been made to impose a uniform editorial style on the electronic appendices.

Appendix A. MtDNA restriction fragment sizes in kilobases for the 14 *Silene vulgaris* individuals in Olson and McCauley 2000. Row labels 1-14 refer to the individuals in Olson & McCauley 2000. Column headings identify the mtDNA probe and restriction enzyme combination used to detect the banding patterns. ? = unknown. Refer to Olson & McCauley 2000 for detailed methods.

Appendix C. Chloroplast and mitochondrial data sets used for phylogenetic reconstructions. (A) The chloroplast data set was constructed by sequencing three regions of the chloroplast genome and scoring for the presence or absence of indels and point mutations. Characters 1-15 (12-15 are indels) are within H-Psba, characters 16-24 are within L1-L2(23 and 24 are indels), Character 25 is an indel within e-f. (B) The mitochondrial data set was constructed by scoring for similarity of RFLP patterns after hybridizing with 10 different mitochondrial gene probes. Characters are in the following order: *cox1* (*NdeI*), *atp6* (*HindII*, *EcoRI*), *18SrDNA* (*HindIII* + *StuI*), *cob* (*HindII*, *EcoRI*), *cox2* (*StyI*), *nad5* (*NdeI*), *atp9* (*HindII*, *EcoRI*), *cox3* (*HindII*, *EcoRI*), *atpA* (*HindII*, *EcoRI*), *nad3* (*StyI*). Different alleles within loci indicated by different numbers or letters. ? = unknown. Sizes of restriction fragments and details of scoring of data are available upon request.
