

These are electronic appendices to the paper by Bidartondo *et al.* 2004 Changing partners in the dark: isotopic and molecular evidence of ectomycorrhizal liaisons between forest orchids and trees. *Proc. R. Soc. Lond. B* **271**, 1799–1806. (doi 10.1098/rspb.2004.2807)

Electronic appendices are refereed with the text. However, no attempt is made to impose a uniform editorial style on the electronic appendices.

**Electronic Appendix A.** Plants sampled for isotope ratio mass spectrometric analysis. L corresponds to Ellenberg's light indicator values. Functional group abbreviations: ECM, ectomycorrhizal; AM, arbuscular mycorrhizal; NM, non-mycorrhizal; FIX, N<sub>2</sub>-fixer.

**Electronic Appendix C.** Molecular characterization of mycorrhizal fungi from German orchids. Only known mycorrhizal lineages (orchid, ectomycorrhizal and/or ericoid) are listed. Obligately ectomycorrhizal lineages are shown in bold. Root numbers are not listed for orchid roots where pelotons (i.e., orchid mycorrhizas) were not observed. The results from 2-4 sections individually analyzed for each root have been combined.

Notes:

\* Lineages known to contain some ectomycorrhizal strains.

‡ Results from ITS1F/ITS4 and ITS1F/4B have been combined.

§ Results from ML5/ML6, cML5.5/ML6 and MLin3/ML6 have been combined. The latter amplified an orchid mitochondrial fragment.

† Partial sequences were obtained that sufficed for identification purposes.

**Electronic Appendix D.** Molecular characterization of fungi from three additional *Epipactis* species sampled outside Germany. All fungal identifications are based on nrITS sequence data obtained from individual root sections containing fungal pelotons. Obligately ectomycorrhizal fungal lineages are shown in bold.
