Catheter dilatation of proximal carotid stenosis during distal bifurcation endarterectomy. *Am J Neuroradiol* 1980; 1:348-9. *In a prospective series of 44 patients referred for CEA in an academic medical center in New York, the 30 day stroke or death rate was 11.4%, double than the percentage reported in the NASCET trials. The Authors conclude that data from CEA clinical trials cannot be generalized and local audits are necessary to better establish the risk/benefit ratio for individual hospitals and surgeons*
