

Supplementary Figure 9 . *Localization of Rab7(Q67L) in wildtype and lamp-1^{-/-}/lamp-2^{-/-} fibroblasts.* Wildtype (**A, C**) and *lamp-1^{-/-}/lamp-2^{-/-}* (**B, D**) were transfected with cDNA encoding GFP-Rab7 (**A-B**) or GFP-Rab7(Q67L) (**C-D**). After 24 h, images of the fluorescence of GFP were acquired. Insets represent enlarged portions of the cell.
