Medium= no stimulus, SEB= Staphylococcal enterotoxin B, CMV= MHC class I restricted peptides derived from HCMV antigens (Supplemental Table 1), EBV= MHC class I restricted peptides derived from EBV antigens (Supplemental Table 1), EBNA1= all 51 overlapping EBNA1 peptides, Pool I-IV= subsets of 10 overlapping peptides of EBNA1 (Supplemental Table 1), and Pool V= subset of 11 overlapping peptides of EBNA1 (Supplemental Table 1). Positive responses for EBNA1 are shown in bold. Non-responsive volunteers are shown in italics, and the EBV-negative volunteer is listed last (RU020).
