Supplemental Table 3. Metabolite profiles of flowers (A), leaves (B), stems (C), seeds (D) and siliques (E). The data were determined from samples of tissue harvested at the same developmental stage and have been normalized as described in the Materials and Methods. Values are presented as mean \pm SE of measurements of six independent samples, with the metabolite content of wild-type Col-0 arbitrarily set to one. Data determined by Student's t-test to be significantly different from Col-0 wild type ($P < 0.01$) are set in bold type.
