

Figure S4. The spindle assembly is intact in the cells treated with Lat B, Y-27632, or blebbistatin. Synchronized HeLa cells on fibronectin were treated with DMSO (Control), Lat B (10 μ M), Y-27632 (50 μ M), or blebbistatin (100 μ M) for 2 h. Percentage of the mitotic cells with normal bipolar spindles in each condition is shown. More than 100 mitotic cells were analyzed in each condition, and the mean \pm s.d of three analyses is shown. *P =0.34, **P =1, and ***P =0.39, as compared with control, analyzed by t-test.
