

Table 8. Clinical Demographics for Stathmin IHC Breast Tumor Set

| | All cases | With PTEN IHC data | P-value |
|--------------------------------|------------------|---------------------------|----------------|
| N | 191 | 181 | |
| Estrogen receptor positive | 126 (66%) | 119 (66%) | 0.96 |
| Progesterone receptor positive | 96 (50%) | 92 (51%) | 0.91 |
| Lymph node metastasis positive | 118 (62%) | 113 (62%) | 0.90 |
| Pre-menopausal | 36 (19%) | 35 (19%) | 0.90 |
| Median age (range) | 64 (26-77) | 64 (26-77) | 0.89 |
| Median tumor size, mm (range) | 25 (2-55) | 25 (2-55) | 0.91 |
| Median followup, years (range) | 6.7 (0.3-13.2) | 6.8 (0.3-13.2) | 0.95 |

Note: P-values are calculated using Pearson's Chi-squared test for categorical variables and the Mann-Whitney test for continuous variables.
