Note that to clarify the intron-exon boundary of the mouse MTMR7 gene, the cDNA sequence of mouse MTMR7 and the DNA sequence of mouse muscle chromosome 8 genomic contig, strain C57BL/6J (GenBank accession no. NT_039459), were compared. Exons 11a and 12a are consistent with insert 1 and 2, respectively. There is no intron between exons 12a and 13.
