There were 7 normal controls (C), 7 bipolar (BD) and 7 schizophrenic (SZ) subjects matched for age, postmortem interval (PMI), hemisphere, gender and pH on a group basis. One BD subject had a cerebrovascular accident (CVA), but this acute event did not affect the hippocampal formation. 18/28 refers to the 18S/28S ratio. %PC represents the Percent Present Calls for the CA2/3.
