

wild type (Columbia)

trident (tdt)

varicose-7 (vcs-7)

varicose-1 (vcs-1)

Supplementary Figure 2. Phenotypes of *vcs-1*, *vcs-7*, and *tdt-1*. This figure shows 11-day, 22°C grown seedlings. In contrast to the four-day seedlings shown in Figure 1, here you can see the *vcs-1* leaf, and its vein patterning defects. Under these growth conditions, neither *tdt-1* nor *vcs-7* produced leaf primordia. Bars = 1 mm.
