

Supplemental Figure 4. The growth of *ga1* GA biosynthesis mutants but not that of the *gid1* triple mutants can be normalized by GA treatment. Shown are four week old *Arabidopsis ga1* mutant plants (*ga1-3*, ecotype Landsberg *erecta*; a new *ga1* allele, SALK_109115, ecotype Columbia) as well as the *gid1* triple mutant (right panel) together with the respective Landsberg *erecta* (Ler) and Columbia (Col) wild type controls. Plants in the upper row were treated with GA (100 μ M GA3 sprayed twice per week), plants in the lower row are untreated.
