

## Additional file 5

### Increased transactivation by Fos/Jun compared to Jun/Jun AP-1 dimer

Min6 cells were transfected with pAP-1-luc reporter (or control vector) and indicated quantity (in  $\mu\text{g}$ ) of expression vector for c-Fos and c-Jun. \*,  $p < 0.05$  vs no expression vector condition.

\*\*,  $p < 0.05$  vs c-Jun alone, by Student T-test ( $n=3$ ).
