## Supplementary Figure 2. Rat APP protein sequence and TX3.833 staining of cells induced to express APP.

(A) Amino acid sequence alignment of rat, mouse, and human APP. Gray boxes, amino acids differing from rat sequence. (B, C) Untransfected CHO cells (CHO) or cells stably transfected with rat APP cDNA (CHO/APP) were subjected to detergent solubilization for Western analysis with TX3.833 (B) or the intact cells immunostained with TX3.833 (green) and phalloidin (red; control for transfection efficiency). A representative transfected cell is shown in (C). Bar = 10  $\mu$ m
