

Supplementary Figure S1 Enhanced IKK γ ubiquitination in TAX1BP1^{m/m} MEFs. TAX1BP1^{m/m} and TAX1BP1^{+m} MEFs were treated with TNF- α (20 ng/ml) in (A) or IL-1 (20 ng/ml) in (B) for 15 and 30 min. Cells were lysed and IKK γ was immunoprecipitated with anti-IKK γ followed by immunoblotting with anti-ubiquitin.
