Code: This column lists the code name used in this study for each of the samples published by previous studies. These codes are also listed in the Haplotype Table S4.									
# of Pigs: All but three of the references whose published sequences are used in this study assigned a GenBank accession number to every individual pig. For those publications, the number placed in this column of the table is 1. The three studies(6-8) which assigned GenBank num									

Table 4. A list of pig sequences from previous studies(1-11) and additional sequences deposited on GenBank from four unpublished studies.

Code	# of pigs	Accession #	Species	Country	Location	Status	Breed	Haplotype	Group
Status: The assigned status of “wild”, “feral”, or “domestic” was determined by the publication in which these samples were originally published. The wild status of a handful of samples is called into question given their genetic sequences. Those specimens are discussed in greater									
Group: This column indicates in which general group (Red, Orange, Yellow, or Grey) on the trees depicted in Figs 1 and S1 the sample belongs. The label ‘nd’ means this sample is not depicted on the trees.
