

Table 7. The 14q13.3 focal amplicon occurs preferentially in lung cancer.

Cancer type	Sample analyzed	Samples found amplified at 14q13.3	Data source
Melanoma	47	0	unpublished data
Colon	128	0	unpublished data
Breast	271	0	Hicks et al. (1)
Lung	261	11	this study
Hepatocellular carcinoma	70	0	unpublished data

Number of human cancer samples analyzed by the ROMA platform of array CGH at the Cold Spring Harbor Laboratory is indicated by cancer type. Amplification level cutoff was set at segment median value of 1.5. Only amplicons ≤ 5 Mb are reported in this table.
