

Figure S1. Fat Body AMP-GFP Fluorescence After Wasp Attack

Percent of fat body cells fluorescing after wasp attack for each of six AMP-GFP *Drosophila* strains: *Attacin-A*, *Cecropin A1*, *Diptericin*, *Drosocin*, *Drosomyacin*, and *Metchnikowin*. The Y-axis represents the percent of individual flies in each fluorescence category. P-values for differences between treatments were generated by comparison of 2x5 contingency tables as in Table 2.
