

Cytokines Day 0

Cytokines Days 1 up to 3

Cytokines P-values

Additional file 5: Relevance networks for module Cytokines.

Edges from the graphs in first page (day 0) and second page (days 1-3) represent significant ($p < 10^{-3}$) negative (green) or positive (red) correlation values.

In the last graph (third page), instead of correlation, the edges represent the p-values of the significantly changes of the correlations.

For this module the comparison of day 0 vs days 4-6 has no statistically significant results.
