86.3	Y	ABHD2	ref NM_007011 Homo sapiens abhydrolase domain containing 2 (ABHD2), mRNA.

The activities of the top 0.3% of nonredundant AP-1 activators identified through GFaCT analysis were reconfirmed in 96-well transient transfection assays. Relative induction of AP-1(PMA) luciferase construct as a function of parental control (pTAL-luciferase) vector activation is reported as fold induction. Gene names, descriptions, and accession numbers are also provided. Where applicable, genes that encode hypothetical proteins and predicted proteins and genes without previously predicted ORFs are designated as unannotated. Sequences for a majority of cDNAs shown were manually confirmed, as indicated.
