

Bootstrap results. The ClustalW phylogenetic tree is annotated with the bootstrap results (1000 resamples). The most important result of this analysis is that the major bipartitions discussed in the text are fairly robust. The highlighted bipartitions divide: prokaryotic from rest (green), amino acid #2 from rest (magenta), Renal system from rest (red), amino acid #1 from rest (orange), and osmolytes from biogenic amines (cyan). Similar results are observed within the PHYLIP tree (not shown).

Experimentally annotated vs. unannotated sequences. Sequence labels for each sequence within the alignment are listed from the parent database (either Swiss-Prot/Tremble or COGdb). The twelve labels in bold correspond to the ORFans now assigned to a functional class.
