<i>NPC1b</i>	<i>NPC1L1</i>		↓ chol. absorp.					(Voght et al., 2007)

Table 1. Summary of *Drosophila* metabolic mutants. Effects of loss-of-function and gain-of-function or overexpression studies are summarized with regard to starvation responses and levels of lipids or carbohydrates (sugar). Lipids refers to TAG, except as listed. Genes include those covered in the text as well as *enigma*, *dUCP5*, *dATF-2*, *desat1*, *Cyp4g1*, *swiss cheese*, and *bubblegum*, which were not discussed. The human sequence ortholog, or functional homolog, is listed for each gene. ^A = ablated tissue of expression; * = hypomorphic allele; ⁱ = RNAi knockdown; blank cells = not determined.
