

Supplementary Figure 6: Interaction of EH domains from different proteins with Stonin2.

| Protein | Residues | ΔH [kcal/mol] | K_d [μM] |
|--------------------|----------|-----------------------|-------------------|
| Eps15 EH1 | 1-120 | -8.3 | 75 |
| Eps15 EH2 | 121-215 | -10.9 | 0.15 |
| Eps15 EH3 | 217-313 | ND | |
| Eps15R EH2 | 120-214 | -5.8 | 0.87 |
| EHD1 | 438-534 | -11.0 | 23 |
| Reps1 | 226-314 | -6.6 | 19 |
| Intersectin1 EH1-2 | 13-309 | ND | |
| Intersectin2 EH1-2 | 13-330 | ND | |

Binding affinities of different EH domains for the NPF region of stonin2 (residues 301-340). High affinity interactions are only observed for the second EH domain of Eps15 and Eps15R. ND= not detected.
