

Table 4 Multilocus test for associations with IGF-1 protein levels, childhood growth and glucose metabolism in a representative birth cohort

| | <i>n</i> | <i>R</i> ² | <i>p</i> value |
|--|----------|-----------------------|----------------|
| IGF-1 levels at birth (ng/ml) | 203 | 0.063 | 0.029 |
| IGF-1 levels (ng/ml) at 7 or 8 years (SDS) | 443 | 0.030 | 0.055 |
| Birthweight (SD) | 787 | 0.009 | 0.408 |
| Birth length (SDS) | 666 | 0.012 | 0.296 |
| Height at 7 years (SDS) | 561 | 0.007 | 0.750 |
| Weight at 7 years (SDS) | 561 | 0.015 | 0.145 |
| BMI at 7 years (kg/m ²) | 561 | 0.015 | 0.214 |
| Body fat mass at 9 years (kg) | 506 | 0.014 | 0.220 |
| Insulin sensitivity at 8 years (HOMA) | 322 | 0.008 | 0.922 |
| Insulin secretion at 8 years (insulinogenic index) | 301 | 0.024 | 0.465 |

The multilocus tests are based on all seven *IGF1* tag-SNPs in additive models,

adjusted for sex, age and parity

HOMA, homeostasis model assessment; SDS, standard deviation score
