

Figure S4: UV/VIS spectra of the quencher DABCYL and the fluorophore FITC. Absorbance spectrum of DABCYL (green dashed line), emission spectra of FITC as an fluorescein antibody conjugate (blue line) and as a fluorescein-dextran conjugate (red line), both at pH 8.0; adapted from the online Fluorescence Spectra Viewer (<http://probes.invitrogen.com/servlets/spectra/>) with kind permission from Dr. Iain Johnson, Invitrogen Corporation, Molecular Probes.
