

Supplemental Figure S3. A, Comparative effect of a 6 h exposure to 100 mM NaCl and 200 mM Sorbitol on the accumulation of *HvHAK1* transcripts (n= 12). B, Effect of the exposure to 100 mM NaCl on the concentration of K⁺ and Na⁺ in roots (n=6). Different letters indicate significantly different values (P<0.05 and P<0.001 for A and B, respectively).
