*Genes have been categorised based on their gene ontology (GO) annotation. Exposed expression levels are shown relative to controls; ^aExpression data of redundant genes, aligned in the same sequence contig or with identical annotations, are shown as averages; ^bLeukotriene B₄ 12-hydroxydehydrogenase (*Ltb4dh*) responded on the microarray, but the fluorescent emission levels were below the set detection criteria. However, previously QPCR data validate a concentration-dependent induction of *Ltb4dh* (see Heckmann et al., 2006 [21]).
