

Additional data file 6. MA plots of raw and normalised microarray data (ibuprofen-exposed *D. magna*)\*

Raw data (0 mg IB l<sup>-1</sup> replicate 1)

Normalised data (0 mg IB l<sup>-1</sup> replicate 1)

A (intensities)

MA plots continued.

Raw data (20 mg IB l<sup>-1</sup> replicate 1)

Normalised data (20 mg IB l<sup>-1</sup> replicate 1)

A (intensities)

MA plots continued.

Raw data (40 mg IB  $\Gamma^{-1}$  replicate 1)

Normalised data (40 mg IB  $\Gamma^{-1}$  replicate 1)

A (intensities)

MA plots continued.

Raw data (80 mg IB  $\Gamma^{-1}$  replicate 1)

Normalised data (80 mg IB  $\Gamma^{-1}$  replicate 1)

A (intensities)

MA plots continued.

Raw data (0 mg IB l<sup>-1</sup> replicate 2)

Normalised data (0 mg IB l<sup>-1</sup> replicate 2)

A (intensities)

MA plots continued.

Raw data (20 mg IB l<sup>-1</sup> replicate 2)

Normalised data (20 mg IB l<sup>-1</sup> replicate 2)

A (intensities)

MA plots continued.

Raw data (40 mg IB  $\Gamma^{-1}$  replicate 2)

Normalised data (40 mg IB  $\Gamma^{-1}$  replicate 2)

A (intensities)

MA plots continued.

Raw data (0 mg IB l<sup>-1</sup> replicate 3)

Normalised data (0 mg IB l<sup>-1</sup> replicate 3)

A (intensities)

MA plots continued.

Raw data (20 mg IB  $\Gamma^{-1}$  replicate 3)

Normalised data (20 mg IB  $\Gamma^{-1}$  replicate 3)

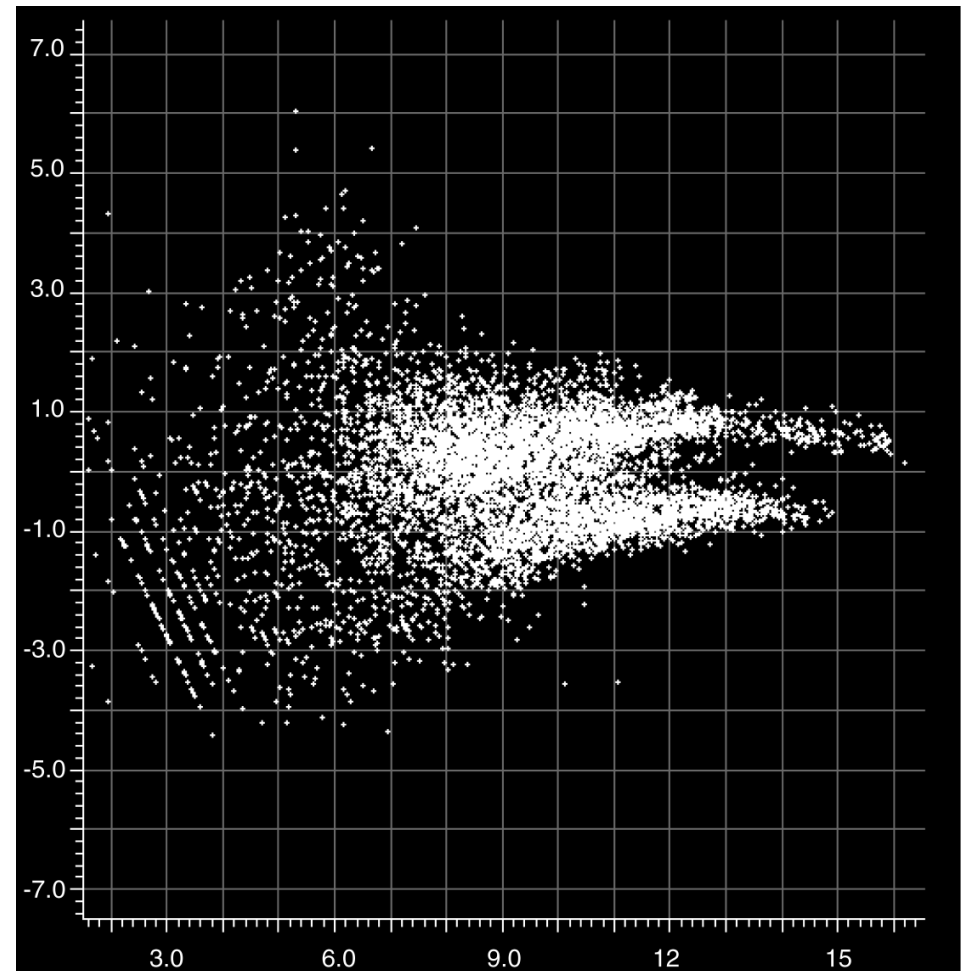

A (intensities)

MA plots continued.

Raw data (40 mg IB  $\Gamma^{-1}$  replicate 3)

Normalised data (40 mg IB  $\Gamma^{-1}$  replicate 3)

A (intensities)

MA plots continued.

Raw data (80 mg IB  $\Gamma^{-1}$  replicate 3)

Normalised data (80 mg IB  $\Gamma^{-1}$  replicate 3)

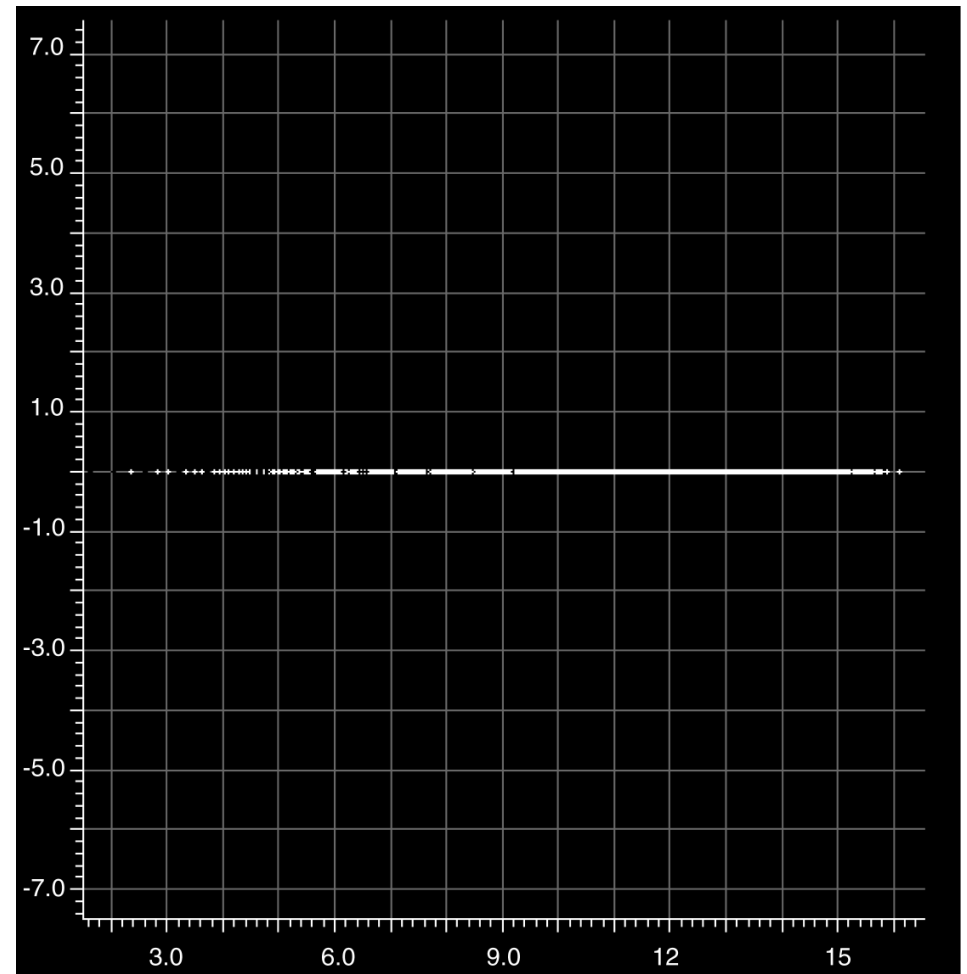

A (intensities)

MA plots continued.

Raw data (0 mg IB l<sup>-1</sup> replicate 4)

Normalised data (0 mg IB l<sup>-1</sup> replicate 4)

A (intensities)

MA plots continued.

Raw data (20 mg IB  $\Gamma^{-1}$  replicate 4)

Normalised data (20 mg IB  $\Gamma^{-1}$  replicate 4)

A (intensities)

MA plots continued.

Raw data (40 mg IB  $\Gamma^{-1}$  replicate 4)

Normalised data (40 mg IB  $\Gamma^{-1}$  replicate 4)

A (intensities)

MA plots continued.

Raw data (80 mg IB  $\Gamma^{-1}$  replicate 4)

Normalised data (80 mg IB  $\Gamma^{-1}$  replicate 4)

A (intensities)

\*Data were normalised using per spot and per chip intensity-dependent (Global LOWESS) normalisation followed by a per gene normalisation to the control samples, within each hybridisation batch, to normalise for batch variations.
