

Supplemental Figure 1:

Hypocotyl length of 4d old etiolated seedlings grown at 22°C in the presence of K- salts or N- sources. At least 30 seedlings from each of three independent experiments were measured. Wt length was set to 100%, error bars represent SE.

**Supplemental Figure 2:**

- (A) RT-PCR of selected genes upregulated in *det3* under permissive and restrictive conditions (At5g65870) or only under restrictive conditions. Primers for *Actin 2* served as a control.
- (B) q-RT-PCR of *LOX2* and *AOC3*, error bars represent SD between 3 technical replicates

## Supplemental Table 1: Oligonucleotides used in this study
