

## Average conservation fraction of all identical bases

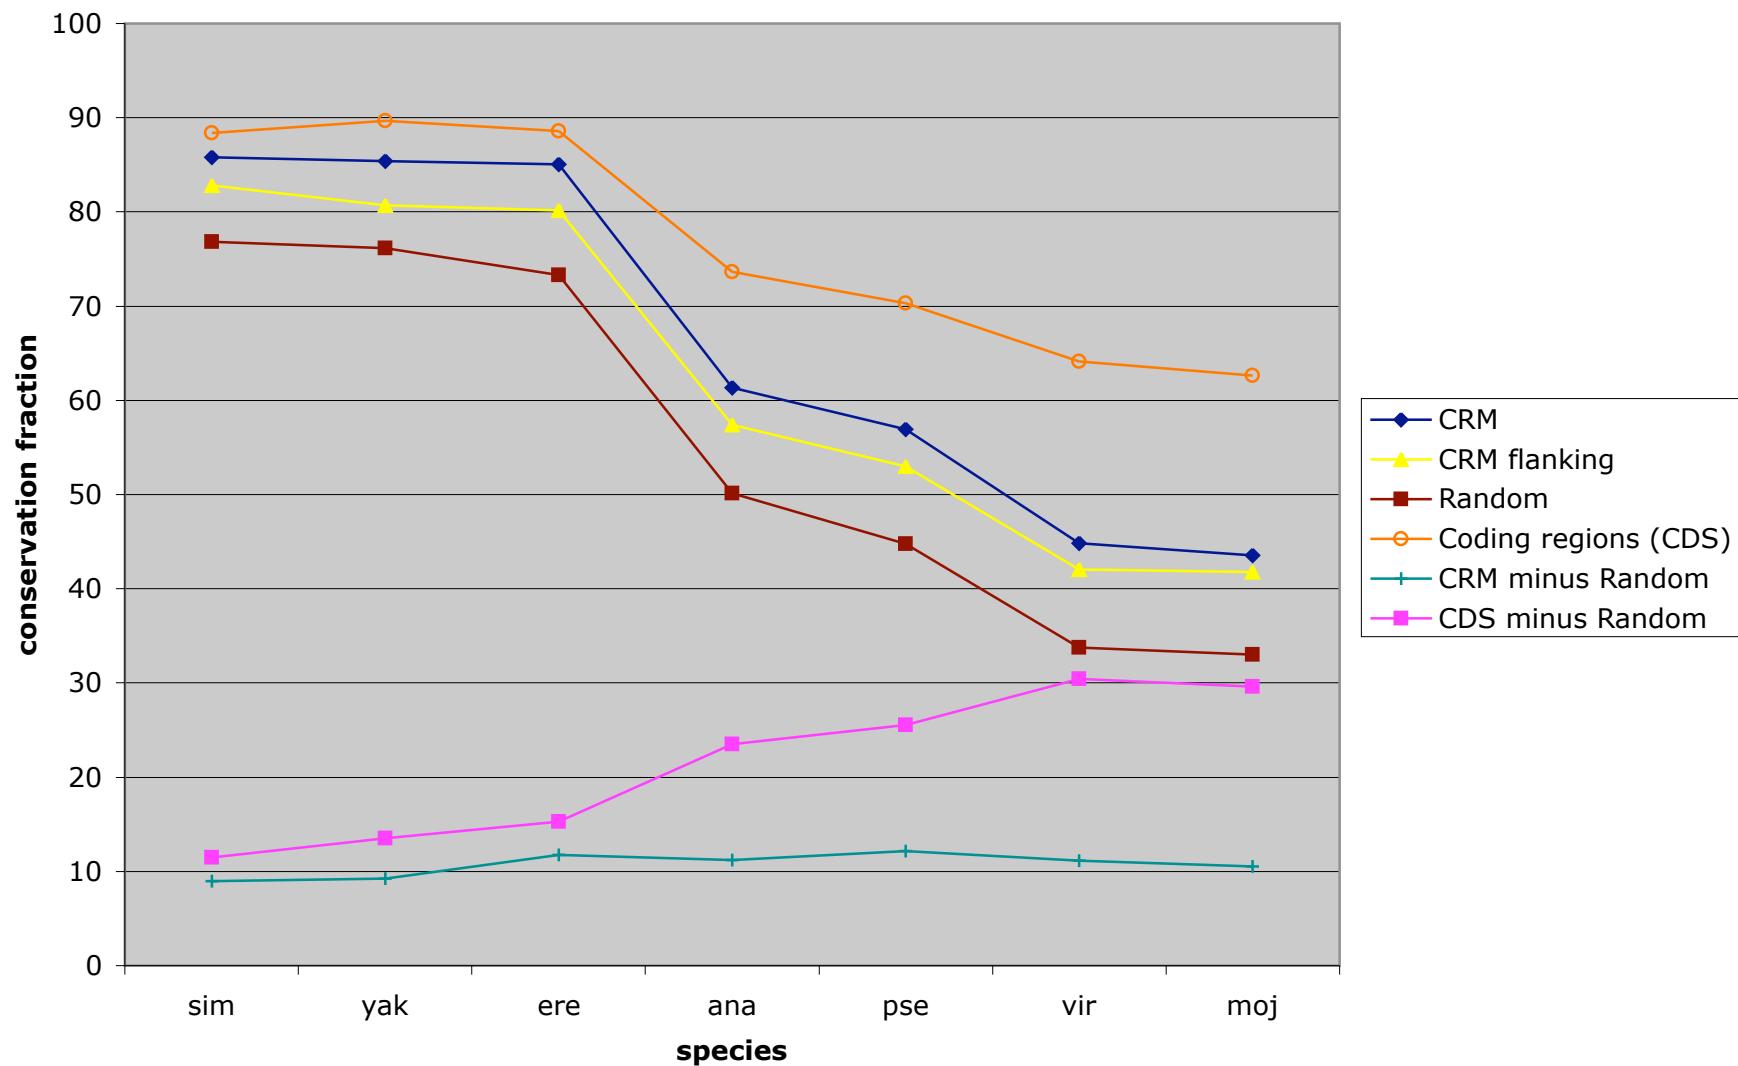

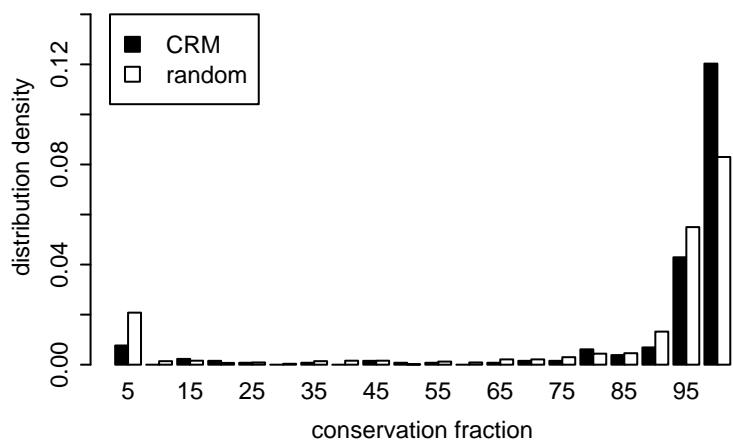

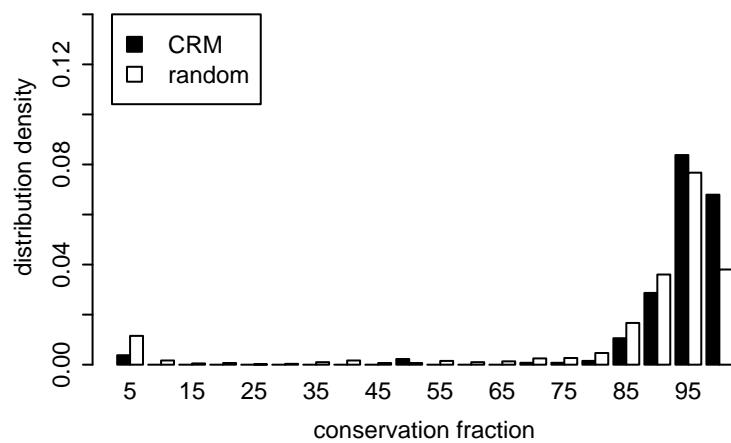

Figure S3-1: Average conservation fraction of all identical bases. See Fig. 3A and legend for details of each data type.

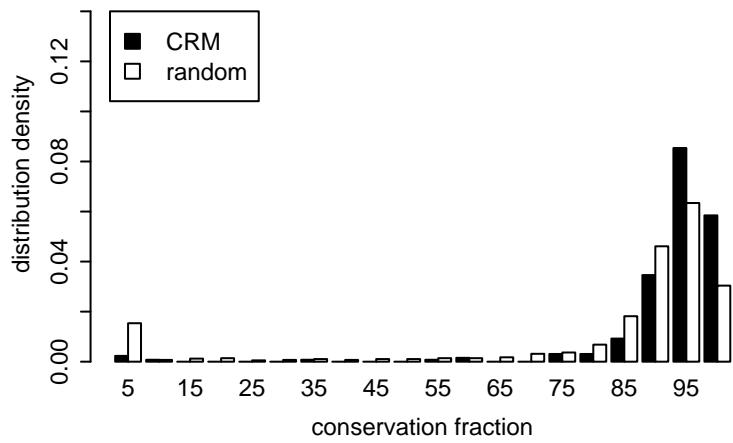

**The distribution of conservation fraction mel/sim**

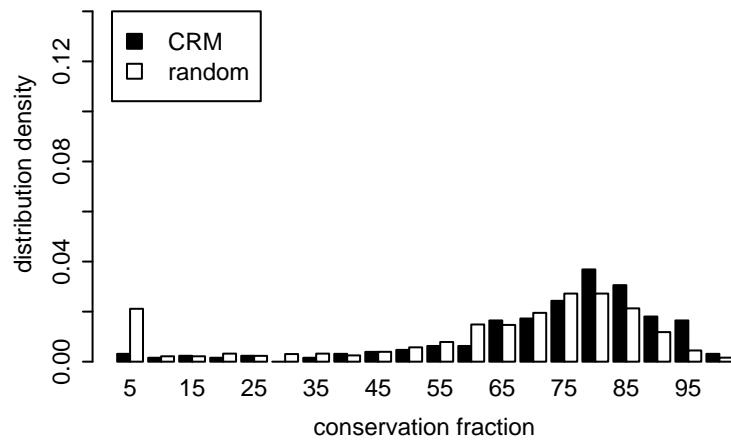

**The distribution of conservation fraction mel/yak**

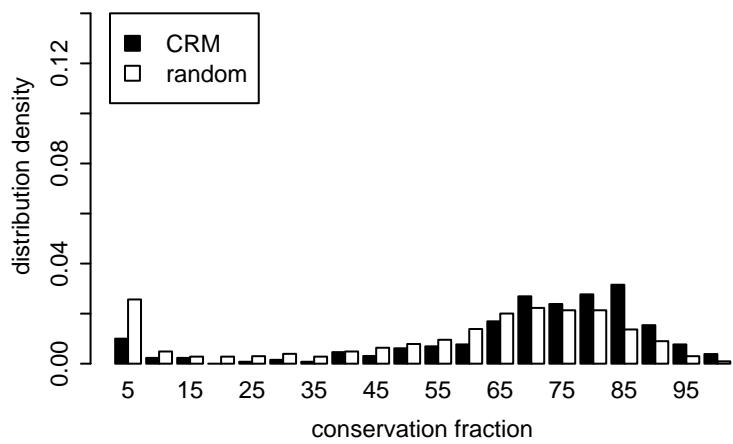

**The distribution of conservation fraction mel/ere**

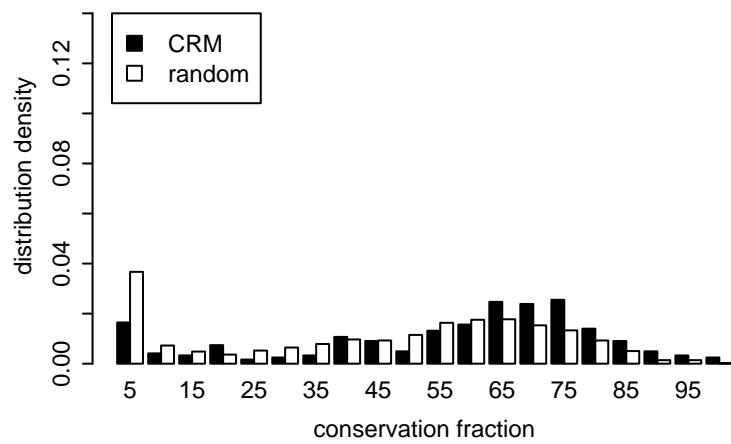

**The distribution of conservation fraction mel/ana**

**The distribution of conservation fraction mel/pse**

**The distribution of conservation fraction mel/vir**

**The distribution of conservation fraction mel/moj**

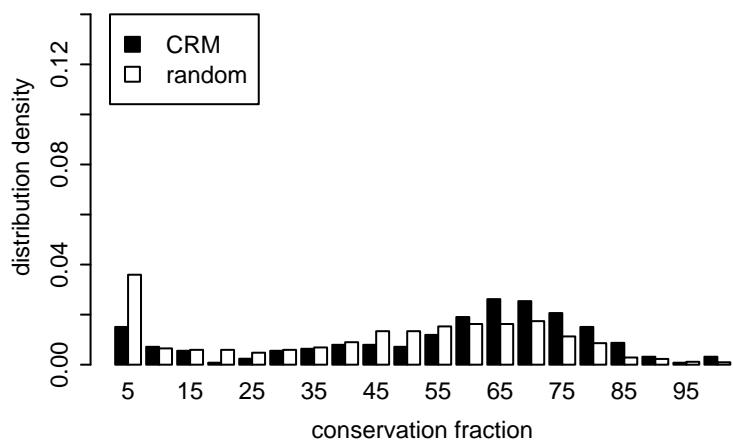

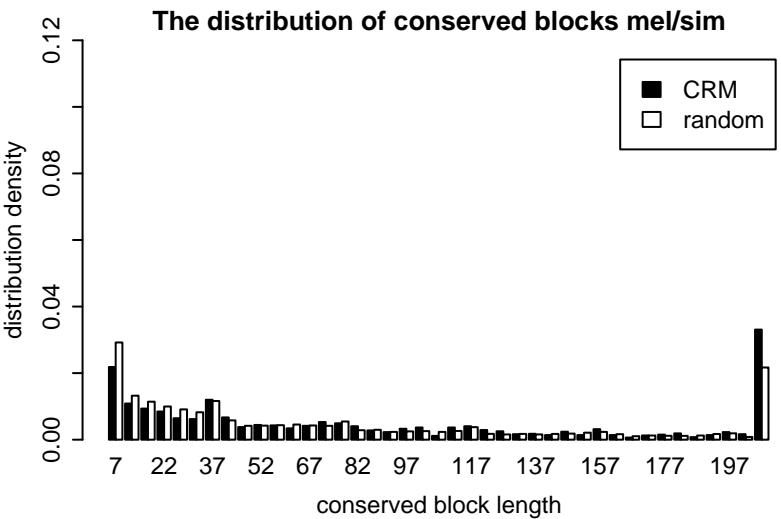

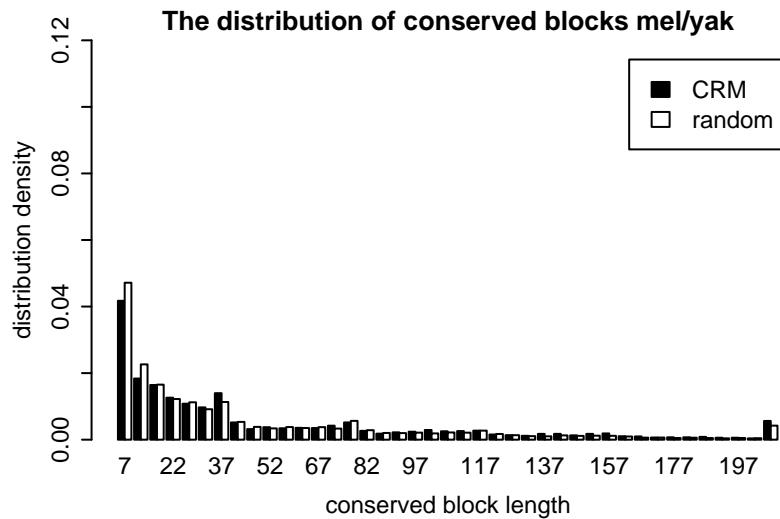

Figure S3-2. Histogram of the conservation fraction for CRMs (black bars) and random non-coding sequences (white bars) for *D. melanogaster* aligned with each of the other species.

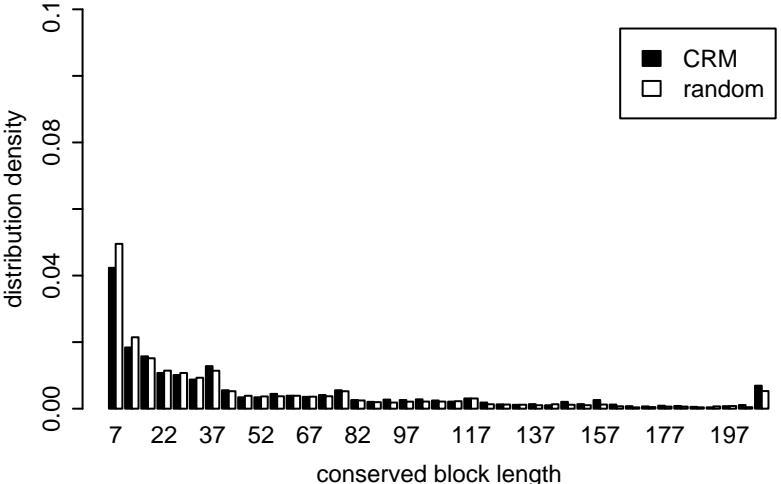

**The distribution of conserved blocks mel/sim**

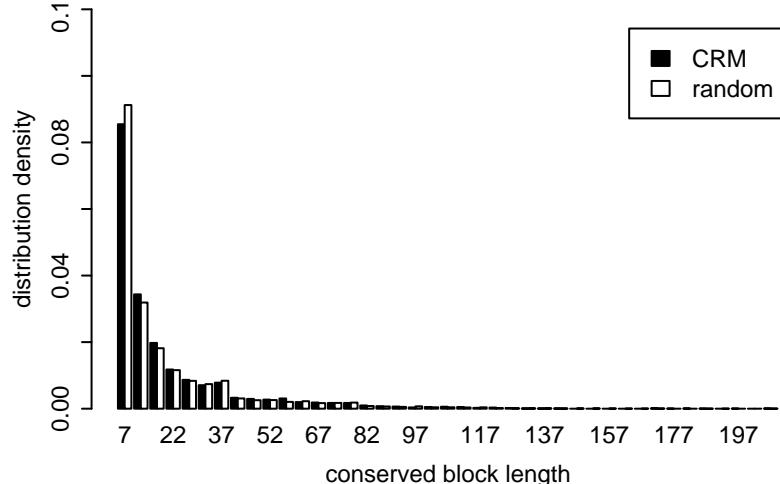

**The distribution of conserved blocks mel/yak**

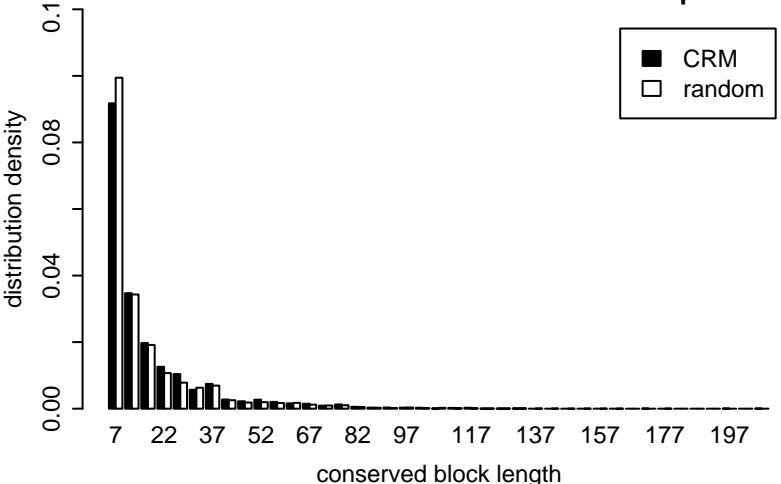

**The distribution of conserved blocks mel/ere**

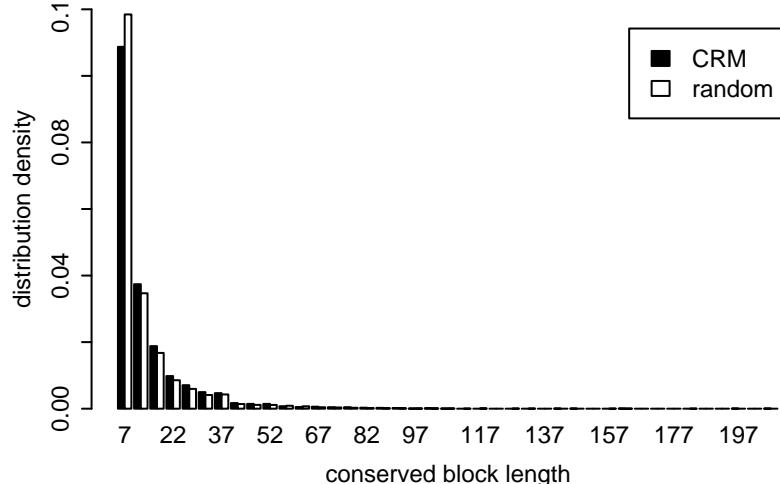

**The distribution of conserved blocks mel/ana**

**The distribution of conserved blocks mel/pse**

**The distribution of conserved blocks mel/vir**

**The distribution of conserved blocks mel/moj**

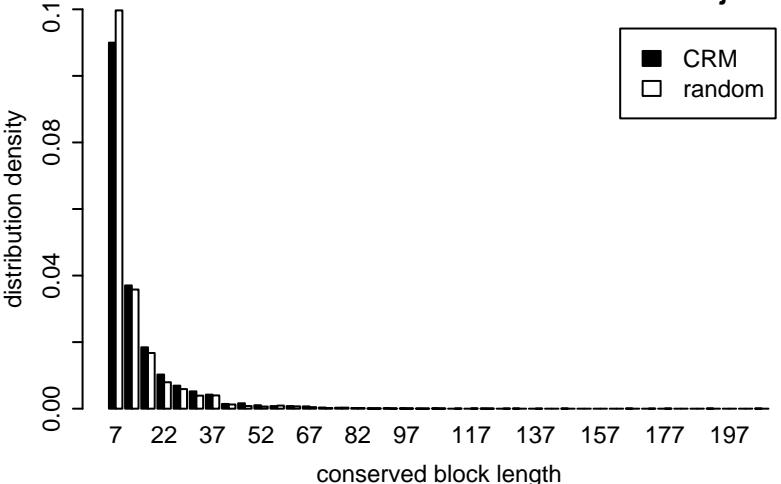

Figure S3-3. Histogram of the conserved block length for CRMs (black bars) and random non-coding sequences (white bars) for *D. melanogaster* aligned with each of the other species.

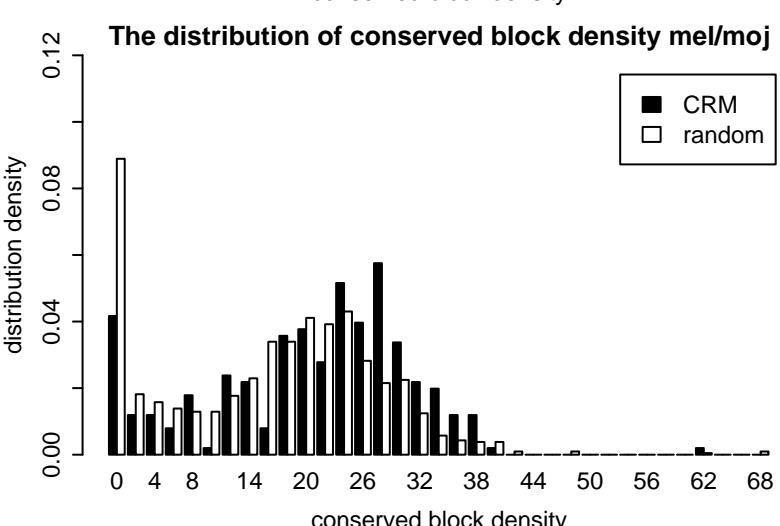

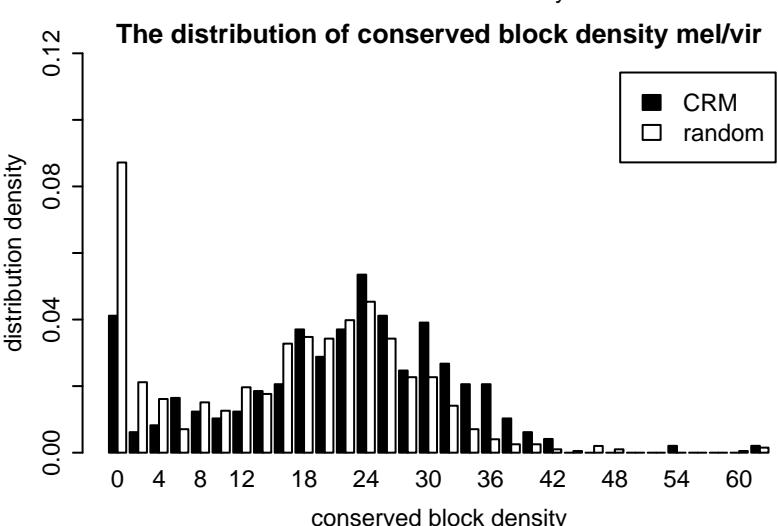

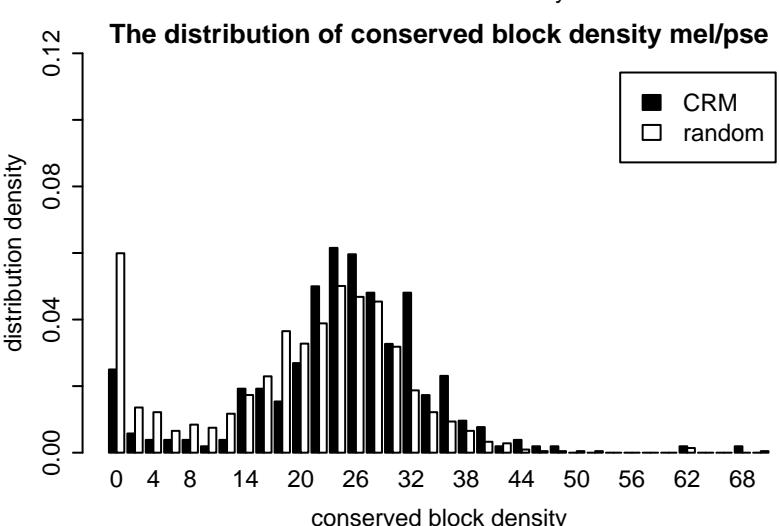

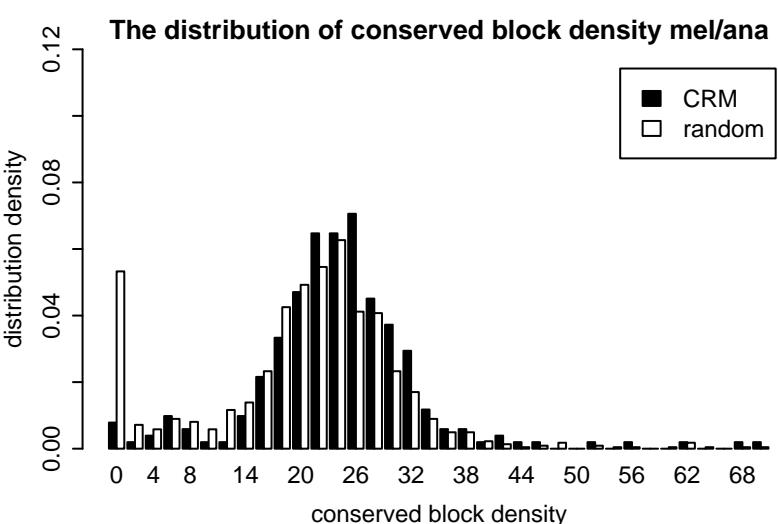

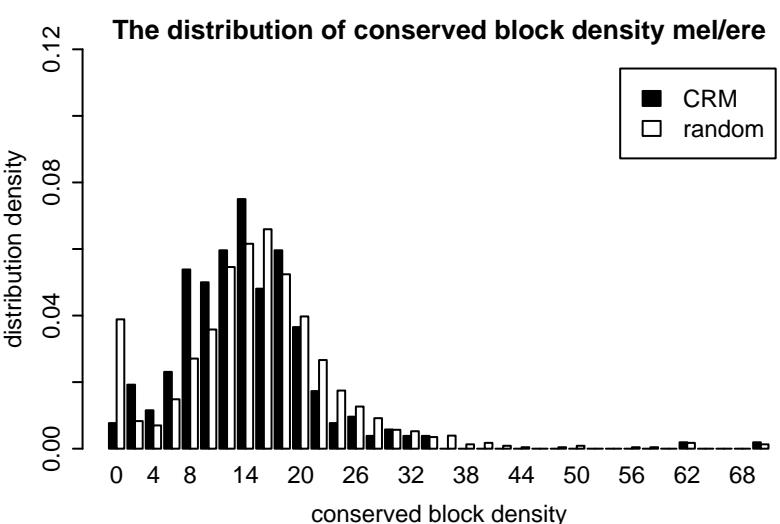

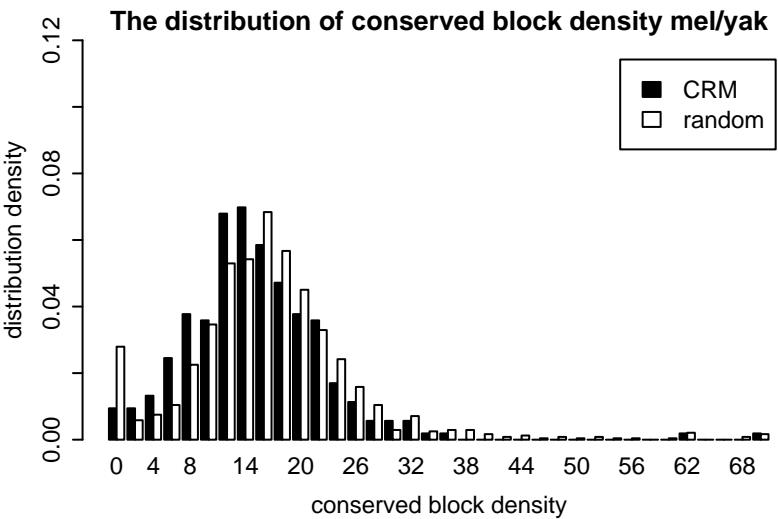

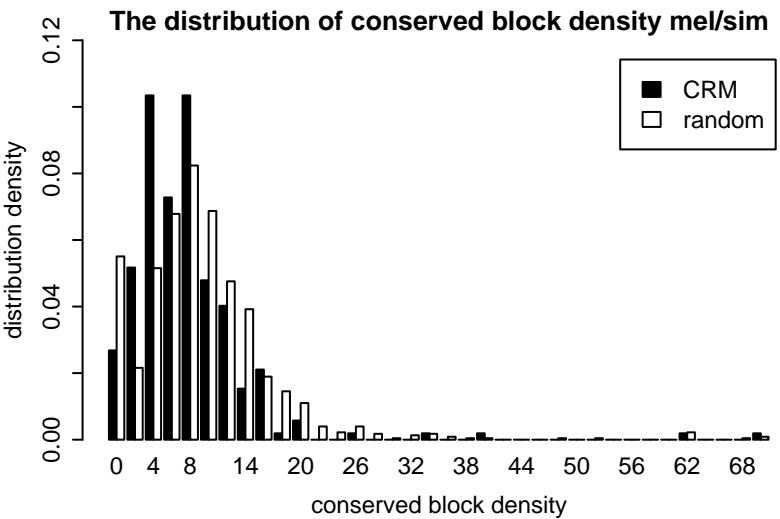

Figure S3-4. Histogram of the conserved block density for CRMs (black bars) and random non-coding sequences (white bars) for *D. melanogaster* aligned with each of the other species.
