Figure S1: Intracellular ppGpp levels of the wild-type 1147 (■) and octuple mutant C8 (□) strains grown in liquid GYM medium. Strains were inoculated into liquid GYM medium and incubated on a rotary shaker (200 rpm) at 30 °C, and ppGpp was extracted with 1 M formic acid from cells harvested at the indicated time points. The measurement of ppGpp was repeated at least twice with similar results.
