Presented are the fold changes and significance levels of all PPAR $\alpha$ -dependently regulated barrier genes in the small intestine after acute (6hr) treatment with WY14643, and the corresponding fold changes observed after long-term (5 days) treatment with WY14643. Data on the acute effects of WY14643 are from the current manuscript, whereas the data from the 5-day experiment were taken from Bünger et al. Listed are the gene symbols, corresponding Affymetrix probeset identifiers, fold changes (FC) and comparison p-values as determined in wild-type mice after acute exposure, and FC and comparison p-values as determined in wild-type mice after 5-day exposure to WY14643. Of all genes that were PPAR $\alpha$ -dependently regulated after 6 hr exposure, 74% was also regulated after 5 days treatment with WY14643.
