

**TABLE 1. Percentage abnormal seeds (white seeds) in wild type and mutants.**  
 Siliques produced by plants with indicated genotypes were opened, and the color of the seeds were observed and counted.

	Wild type (COL-er)	<i>luh-1</i>	<i>luh-1/luh-1</i> ; <i>lug-16/+</i>	<i>lug-16</i>
White	11	16	56	18
Green	368	374	97	382
% White	2.9%	4.1%	36.6%	4.5%
N (Number of Plants)	10	10	6	10
